

# UV & GERMICIDAL LIGHTING SOLUTIONS

## NOW AVAILABLE FOR LEASE AT 0% INTEREST

Reduce germs, microbes, and viruses with UV and ionizing solutions. Disinfect and clean your facility with UV lighting equipment from FSG for as little as \$5 per day.

*Government funds are available from FEMA, the CARES Act, and the Coronavirus Response and Relief Supplemental Appropriations Act of 2021*

### Why Lease Portable Disinfection Equipment?

Commercial buildings have used UV lighting and ionization to promote healthier indoor environments for decades. Hospitals and medical facilities use this technology to disinfect and decontaminate surfaces and tools. Now you can harness the power of both ionization and UV and germicidal lighting for your facility without the cost of ownership.

#### Mobile, User-Friendly Systems

Easy-to-use and portable solutions for hospitality, schools, kitchens, offices, and more

#### Lease Only What You Need

Work with FSG to lease only the disinfection equipment that you need for an affordable price. Equipment is fully warranted during the lease period

#### Unique Patented Technology

The CELLO 4 in 1 unit utilizes 3 proven technologies: HEPA Filtration, UVC Disinfection and Needlepoint Bipolar Ionization (NPBI)

#### The FSG Worry Free Lease

The 4 in 1 unit comes with a 36 month manufacturer warranty, and ships with 4 spare lamps, 3 replacement filters, and a sign to inform employees and customers that you are disinfecting your facility

## UV & GERMICIDAL LIGHTING SOLUTIONS

# FAQS

### **Is UV Lighting and NPBI Effective Against COVID-19?**

According to the April 2020 Illuminating Engineering Society (IES) report, their answer is “yes,” UV lighting can effectively inactivate the COVID-19 virus under certain conditions. The most effective UV lighting for inactivating viruses is UV-C lighting. NPBI has also been shown to deactivate over 99% of COVID-19 in 30 minutes.

### **Why Combine UVC with NPBI?**

Both UVC and NPBI have been proven to deactivate COVID-19 as well as many other pathogens. Combining these technologies in one unit provides the most effective and powerful solution available to clean both air and surfaces

### **Can the 4 in 1 be used when people are present?**

The CELLO 4 in 1 unit operates when spaces are occupied. Pathogens in the air are disinfected continuously with both UVC and NPBI. In addition, NPBI also deactivates pathogens on surfaces in 30 minutes. When your space is vacant, powerful UVC lamps can also do deep disinfection of both air and surfaces.

### **How will this help my employees or customers?**

The 4 in 1 cart will disinfect the air in a 1,000 square foot space 6 times an hour, and will constantly release ions that will deactivate pathogens on surfaces like counters, doorknobs and faucet handles. At night the powerful UVC lights deeply disinfect all surfaces in additional rooms. Employees and customers can feel safe again.
